

NAREN EDPUGANTI

Senior Angular & Full Stack Developer

(423) 902-8634 | narenedpuganti@gmail.com | Atlanta, GA, USA | narenedpuganti.com | github.com/nedpuganti

PERSONAL PROFILE

Senior Angular and Full Stack Developer with 12+ years of progressive experience architecting and delivering enterprise-grade web applications, hybrid mobile platforms, and cloud-native SaaS products across healthcare and retail technology. Recognised for deep, sustained expertise in Angular (v2–22), TypeScript, RxJS, PrimeNG, Angular Material, and Ionic — complemented by solid full-stack proficiency in Node.js and NestJS. Author of the published open-source Angular package ngx-advanced-daterangepicker. Demonstrated track record of leading cross-functional agile teams, establishing component-driven development standards, and shipping approximately 25 production-grade products spanning mobile applications, administrative portals, consumer platforms, and financial systems.

12+ Years

Industry Experience

~25 Products

Shipped to Production

5 Apps

on Apple App Store

1 npm Package

Open-Source Published

CORE COMPETENCIES

Angular / Frontend: Angular v2–22, TypeScript, JavaScript (ES6+), RxJS, Angular Material, PrimeNG, Nx Monorepo, Astro

Mobile Development: Ionic Framework, Apache Cordova, Flutter, React Native

Databases: PostgreSQL, MongoDB, MySQL/SQL, Firebase, Sequelize, Knex

Testing: Jest, Cypress, Playwright, Cucumber

Open Source: ngx-advanced-daterangepicker (npm) — Angular date-range picker

Styling & UI: HTML5, CSS3, SCSS/SASS, Bootstrap, Tailwind CSS, LESS, Responsive Web Design, Storybook

Backend: Node.js, Express.js, NestJS, Kotlin + Spring Boot, REST APIs, GraphQL, RabbitMQ, Kafka, Redis

DevOps & Cloud: Docker, Kubernetes, Jenkins, ArgoCD, Nginx, CertManager, AWS (S3, SNS, SQS, SES, EC2), GCP

AI / LLM: Generative AI, RAG, Vector Databases, MCP, Ollama, Mistral, OpenAI API, Gemini API

Tools & Practices: Git, Jira, Swagger, Postman, Sonar, ELK Stack, Grafana, Agile/Scrum, CI/CD, TDD

PROFESSIONAL EXPERIENCE

Senior Angular / Full Stack Developer

Mar 2016 – Present

Allied Informatics Inc. | Atlanta, GA

Full-cycle front-end and full-stack engineer across enterprise SaaS and retail technology engagements — contributing across web portals, mobile applications, financial systems, and cloud-native platforms in Agile environments over 9+ years.

- Architected and maintained three mission-critical Angular portals — Practice, Admin, and Patient — forming the core front-end layer of an enterprise SaaS platform serving clinicians, administrators, and patients, with HIPAA-aligned access control and secure data workflows throughout.
- Authored and published ngx-advanced-daterangepicker to the npm registry — an open-source Angular date-range picker built with Angular Material and LESS, subsequently adopted by the wider Angular developer community.
- Architected reusable, modular Angular component libraries with granular role-based access control (RBAC), route guards, and permission directives — ensuring consistent UX across portals and reducing feature delivery time by approximately 30%.
- Engineered fully automated CI/CD pipelines using Jenkins, Docker, Kubernetes, and Argo CD, substantially reducing mean deployment times and enabling frequent, reliable releases to production.

- Configured NGINX load-balancing across distributed Node.js instances, sustaining application performance at workloads exceeding 5,000 concurrent users.
- Integrated REST APIs spanning appointment scheduling, patient records, billing, and administrative operations; conducted requirements analysis increasing overall delivery efficiency by 17%.
- Upheld an 85% stakeholder satisfaction rate and achieved a sustained ~20% uplift in team productivity through structured agile ceremonies, retrospectives, and continuous process improvement.
- Contributed to the delivery of over 20 production-grade products — spanning mobile applications, consumer platforms, retailer dashboards, administrative portals, and financial reporting systems.
- Led the development of Mercury|One, a cloud-based convenience-store back-office mobile application providing real-time visibility into sales, pricing, and transactions, published to the Apple App Store.
- Designed and built the Trunow consumer rewards platform (iOS, Android, and web), enabling gas price discovery, receipt scanning, and cash-back redemption for a growing national user base.
- Delivered Trunow Retailer and Trunow Locations applications, equipping retail partners with analytics dashboards, pump price management, loyalty certificate redemption, and customer acquisition tooling.
- Sustained a 15% improvement in overall code quality through structured peer reviews, technical mentorship, and continuous process refinement.
- Established Angular coding standards, ESLint/Prettier configurations, and mandatory peer-review processes; mentored junior engineers on RxJS reactive patterns and Angular best practices.

Technologies: Angular v2-22, TypeScript, RxJS, PrimeNG, Angular Material, SCSS, Tailwind, Ionic, Cordova, Flutter, Node.js, NestJS, PostgreSQL, REST APIs, Jest, Cypress, Playwright, Jenkins, Docker, Kubernetes, NGINX, Argo CD, AWS

Freelance Front-End & Web Developer

2014 – 2017

Independent — Multiple Clients | Healthcare, Nonprofit & Early-Stage Technology | Atlanta, GA / Remote

- Endohealth Atlanta: Designed and implemented the end-to-end UI architecture using jQuery, HTML5, CSS3, AJAX, and JSON; asynchronous data services enhanced coordination and materially improved user satisfaction.
- Incustart: Contributed front-end engineering within an early-stage product team, supporting rapid prototyping and iterative feature delivery.
- Premier Cosmetic Surgery: Delivered a bespoke responsive interface using HTML5, CSS3, and jQuery incorporating appointment booking workflows and a branded media gallery.
- ASA Charity (asa.help): Delivered a complete .NET C# web application backed by SQL Server for a nonprofit healthcare support organization, encompassing donation tracking, user management, and a resource directory.

Technologies: Angular, JavaScript, jQuery, Bootstrap, HTML5, CSS3, AJAX, .NET C#, SQL Server, Git

PROJECTS & OPEN SOURCE

ngx-advanced-daterangepicker

npmjs.com/package/ngx-advanced-daterangepicker

Tech: Angular, Angular Material, TypeScript, LESS

Published open-source Angular date-range picker component. Implemented with Angular Material and LESS; adopted by the wider Angular developer community as a production-ready, configurable date-range solution.

Mercury|One Mobile & Inventory

Apple App Store

Tech: Angular, Ionic, Apache Cordova, JavaScript, HTML5, CSS3, REST APIs

Cloud-based convenience-store back-office application delivering real-time sales monitoring, pricing management, and transaction visibility. A companion inventory module provides SKU scanning and ERP-integrated stock tracking.

Trunow — Consumer, Retailer & Locations Apps

Apple App Store (3 apps)

Tech: Angular, Ionic, Apache Cordova, JavaScript, HTML5, CSS3, REST APIs

Suite of three cross-platform mobile applications: a consumer platform for gas price discovery and cash-back rewards; a retailer portal for loyalty certificate redemption and analytics; and a business-facing app for network acquisition and c-store operations.

Portfolio GenAI Chatbot

github.com/nedpuganti

Tech: Node.js, Express.js, Google Gemini API, RAG, Prompt Engineering

AI-powered portfolio assistant using retrieval-augmented generation (RAG) over structured portfolio data. Achieves approximately 1.7-second average response time with 60% lower memory consumption than comparable implementations.

EDUCATION

Master of Science — Computer Science <i>University of Tennessee at Chattanooga Chattanooga, TN, USA</i>	2014 - 2015
Bachelor of Engineering — Computer Science <i>SRKIT India</i>	2009 - 2013
Intermediate (11th - 12th Grade) <i>Sri Chaitanya College India</i>	2007 - 2009
Secondary School (LKG - 10th Grade) <i>St. John's High School India</i>	Until 2007

LANGUAGES

English — Professional fluency (spoken and written)
Telugu — Native

ADDITIONAL INFORMATION

- Five applications published to the Apple App Store: Mercury|One, Mercury|One Inventory, Trunow, Trunow Retailer, and Trunow Locations.
- Open-source contributor: ngx-advanced-daterangepicker — a production-quality Angular date-range picker on npm.
- Actively building with Generative AI: RAG pipelines, Model Context Protocol (MCP), Ollama for local LLM deployment, and OpenAI/Gemini API integrations.
- Work authorisation: Eligible to work in the United States. Available for remote, hybrid, or on-site engagements.
